EDUCATION

B.Tech in Computer Science and Engineering (Artificial Intelligence) 2023 – 2027 Vignan's Institute of Information Technology CGPA: 8.5

PROJECTS

TeleConnect Customer Churn Prediction Revenue Forecasting

- Developed an end-to-end Machine Learning pipeline using the IBM Telco Customer Churn dataset containing 7,000+ customer records and 21 features.
- Built and evaluated 5 classification models for customer churn prediction and 7 regression models for monthly revenue forecasting using Scikit-learn.
- Achieved best classification performance with Tuned RBF SVM (78
- Identified high-risk churn segments including month-to-month contract customers with fiber-optic internet and electronic-check payments, enabling targeted retention strategies with an estimated ROI of 4.9×.

Financial News Sentiment Analysis using NLP

- Developed an NLP-based system to classify financial news into Positive, Negative, and Neutral sentiments.
- Performed preprocessing including tokenization, stop-word removal, and TF-IDF vectorization.
- Built and evaluated models using Logistic Regression and Naive Bayes with Scikit-learn.
- Achieved an accuracy of 87
- Evaluated model performance using precision, recall, F1-score, and confusion matrix analysis.

House Price Prediction using Machine Learning

- Built a regression model to predict house prices based on features such as location, area, and number of rooms.
- Performed data cleaning, feature engineering, exploratory data analysis, and feature scaling using Pandas and NumPy.
- Trained and compared Linear Regression and Random Forest models to identify the best-performing approach.
- Improved prediction accuracy through hyperparameter tuning and model optimization.

ACHIEVEMENTS

- Participated and earned certification in **Mumbai Hack 2025 Hackathon**, demonstrating strong problem-solving and teamwork skills.

SKILLS

Programming: Python (Strong), C, C++, Java [4pt]
AI / Machine Learning: Supervised Learning, Classification, Regression, Feature Engineering, Model Evaluation, Hyperparameter Tuning, Explainable AI (SHAP) [4pt]
Libraries and Frameworks: NumPy, Pandas, Scikit-learn, TensorFlow, NLTK, SHAP, Matplotlib, Seaborn [4pt]
Core CS: Data Structures, Algorithms, Object-Oriented Programming, DBMS, Operating Systems [4pt]
Tools: Jupyter Notebook, Git, GitHub, GitHub Actions
